General

Code number (without electronic unit)	109Z0420	Approvals
Electronic unit - Leisure	101N2740, 40 pcs: 101N2741	UL / CB
Compressors on pallet	240	

Application

Application range		LBP/MBP
Voltage range	VDC	9.6 - 17 / 19 - 34

Cooling requirements

Application	LBP	MBP
32°C / 38°C / 43°C	S	S

Absolute maximum ratings

Machine compartment temperature °C	-10 to 50
Max. compressor tilt angle for temporary operation	±30°
Operating pressure range	see diagram to the right

Any levels of stress exceeding the absolute maximum value of machine compartment temperature range or operating pressure range or tilt angle may damage the device. Prolonged exposure to stress above the recommended operating conditions may also affect the device's reliability.

Motor

Motor type		permanet magnet, brushless DC

PRODUCT BULLETIN

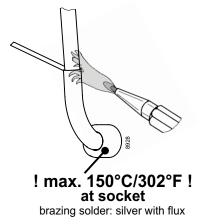

The BDN45F, BDN50K, and MB3CKV compressors use a special discharge connector element (see figure 2) that is directly connected to the discharge tube to optimize energy consumption.

This element is made from plastic and sensitive to high heat exposure.

When brazing a tube into the discharge connector (see figure 1) please ensure that the area with the discharge connector element never exceeds 150°C / 302°F.

Don't heat up the bottom of the connector directly.

Use a fork burner (see figure 3) and/or a damp cloth, if necessary. A protective plate can also serve to protect the discharge connector element from direct heat from a flame. Do not braze longer than 10 seconds and wait for 5 minutes for the next soldering attempt.
